

Specimen Identification Kit

MODEL - AKBIO017

MAKE - AK LABS

The Specimen Identification Kit is an educational biology kit designed to help students identify and classify biological specimens. It enhances understanding of taxonomy, morphology, and biodiversity through hands-on observation and practical laboratory learning activities.

KIT SPECIFICATION

Kit Name	Specimen Identification Kit
Subject	Biology
Learning Areas	Specimen Identification, Classification, Taxonomy, Morphology, Biodiversity
Components	Preserved Specimens, Biological Samples, Identification Charts, Magnifying Lens, Forceps, Observation Trays, Labels
Material	Laboratory Grade Preserved Biological Specimens & Educational Tools
Application	Biology Practicals, Taxonomy Studies & STEM Education
Suitable For	Schools, Colleges, Biology Laboratories, Universities & Educational Institutions

KIT DETAILS

The **Specimen Identification Kit** provides essential biological specimens, charts, and tools required for identifying and classifying living organisms. Students learn morphological features, taxonomic classification, and biodiversity concepts through practical observation

and comparison. The kit strengthens scientific observation skills and biological understanding. Ideal for schools, colleges, biology laboratories, and STEM-based learning environments.
